

# Ultrimis Ultrasonic water meter DN15-DN50

Ultrimis, a state-of-the-art ultrasonic water meter with the latest patented design features the W-Sonic Technology, a unique metering method. The W-Sonic Technology enables meter readings in the R800 range with the starting flow already from 0.75 l/h.

The water meter is designed and manufactured to the highest quality standards. The water meter is rated at IP68 and with a high resistance to hydraulic shock and magnetic interference. The measurement chamber is designed to provide the water meter with insensitivity to hydraulic shock. The ultrasonic measurement technology of the water meter is completely impervious to interference from magnetic fields.

#### **APPLICATION**

Water supply systems with the maximum cold water temperature of 50°C and the maximum hot water temperature of 70°C, requiring reliable water consumption metering and reliable data communication methods, including remote meter reading over NFC, WM-Bus or LoRaWAN. The water meter can be installed in any orientation and does not require upstream and downstream sections of straight piping.

# **Ultrimis**

# **ADVANTAGES**

#### Provides savings

- High-precision measurement improves efficiency of water use: the water meter can detect all leaks in the supply system
- No moving parts for a high resistance to fouling: cost-free inspection and maintenance
- No upstream or downstream **straight sections** of piping required
- **Compact size** for easy installation in confined spaces
- Robust design and minimum electrical power demand for a stable, long-term operation
- A wide measurement range with immunity to electrical conductivity of metered water (as required for electromagnetic water meter systems)
- Extremely **low pressure loss** (and low resistance to flow)

## Convenient in operation

- Standard **IP68**-rated hermetically sealed body
- No risk of physical wear of the measurement chamber components during continuous operation, even at high flow rates
- MAP **16 bar**
- Body material brass or composite
- Resistant to strong magnetic fields
- Resistant to hydraulic shock
- Highly resistant to overload flow rate Q<sub>4</sub>

#### Measurement accuracy

- Optimized measurement range: up to **R800** in every operating orientation (H, V, and H/V)
- Starting flow already from **0.75 l/h**
- Stable measurement system performance by insensitivity to fouling
- Back flow measurement enabled by a symmetrical structure and the applied measurement algorithms

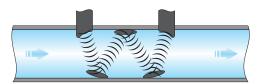

#### Environmentally friendly

- Extremely **low power usage** when in operation
- Very low lithium content: Li < 1.5 g
- Maximum design battery life of 16 years (depending on the configuration and environmental conditions)
- Low energy output at the water supply side (the unit pressure drop across the water meter is **0.17 bar** at DN40 for Q<sub>3</sub>)
- A measurement range up to R800 is also available for the water meter installation length L = 80 mm
- Very low weight: low costs of transport
- Low carbon footprint

The Ultrimis water meter features a unique measurement system: it emits an ultrasonic beam across the measurement chamber, which results in steady indications and errors in the whole measurement range. This is the W-Sonic Technology which includes distinctive characteristics:

- With its unique ultrasonic beam pattern, the Ultrimis can be much more compact than other ultrasonic metering systems
- The full-bore design does not entrap any fouling or solids
- Insensitive to measurement bias from water contamination
- Sophisticated control algorithms of the ultrasonic beam system provide compensation for component ageing
- Requires no filters or check valves

# REGULATORY AND STANDARD COMPLIANCE

- Directive 2014/32/EU of the European Parliament and of the Council of 26 February 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of measuring instruments
- Polish Act of 13 April 2016 on conformity assessment and market control systems
- EN-ISO 4064-1 to 5:2014(E) Water meters for cold potable water and hot water
- OIML R49:2013 Water meters for cold potable water and hot water
- EC Type Test Certificate TCM 142/16-5405 for cold and hot water applications
- Classification of climate and environmental requirements Class B (EN-ISO 4064:2014)
- Classification of environmental and mechanical requirements Class M1 (Directive 2014/32/EU of 26 February 2014)
- Classification of environmental and electromagnetic requirements Class E1, E2 (EN-ISO 4064:2014; Directive 2014/32/EU of 26 February 2014)s
- PZH (NIH) approval (all materials of the Ultrimis ultrasonic water meter have the appropriate Hygiene Approvals for contact with potable water)
- Directive 2014/53/EU of the European Parliament and of the Council of 16 April 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC
- WELMEC 7.2 edition 5
- WRAS certified
- KIWA U certified
- DVGW certified
- IP68 body proof testing
- OMS compliant DVGW certified
- LoRaWAN Specification Version V1.0.4 compliance certificate

UL4-01 DN20, L130 DN20, L105

UL2,5 DN15, L80 DN15, L110 DN15, L115 DN15, L165

UL4 DN20, L130 DN20, L105 DN20, L115 DN20, L190

# Communication

- Water meter data reading over NFC (Near Field Communication)
- RF (radio-frequency) reading of indications compatible with WM-Bus
- RF indication reading for walk-by and drive-by reading systems and stationary reading systems without any reconfiguration required
- Secondary verification at any suitable location with the Testbox module and a dedicated application

#### **NFC CONFIGURATION**

The Ultrimis water meters feature standard NFC data communication which enables configuration of the operating mode, reading of actual parameter values of the instrument and downloading the historical indications of statuses and errors (even at a low battery voltage or meter failure).

Developed specifically for the Ultrimis water meter, the data communication interface includes a dedicated SPIDAP application and the Testbox module. The data communication interface enables re-verification by secondary verification operators SPIDAP.

The data logger supported by NFC enables modification of the interval and range of data logging.

The data logging interval can be configured from 12 minutes to 45 days. One of the 10 predefined data acquisition sets can also be selected.

Depending on the data acquisition set selected, up to 800 unique records can be stored. The data acquired can drive histograms to evaluate whether the water meter has been specified correctly for its actual application.

#### **RF READING**

The water meter has an integrated RF data communication module for easy and efficient remote data reading in walk-by, drive-by and stationary reading systems.

The WM-Bus data connectivity enables reading of the following data:

- Water meter indications (from a logged month of choice and at the time of reading)
- Reverse volume (at the time of the reading)
- Events/alarms (from a logged month of choice, the current month, and at the time of reading), including:
  - □ Reverse flow
  - □ Low flow
  - □ High flow
  - □ No water
  - □ Low battery
  - □ Tampering detected
  - □ Temperature limit violation
  - □ Zero flow

#### Wireless M-Bus + LoRaWAN

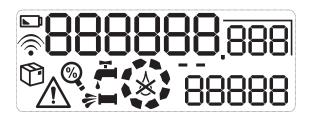

The Ultrimis LoRaWAN + WM-Bus water meter versions are intended for stationary reading systems. They facilitate default data communication over LoRaWAN with a long range and a low power consumption. If there is no LoRaWAN service, the water meter automatically switches over to WM-Bus communication. One of the following data communication methods can also be configured for permanent use:

- LoRaWAN only
- WM-Bus only
- Hybrid LoRaWAN is default; if there is no LoRaWAN service, WM-Bus is automatically switched to.

The LoRaWAN communication is divided into two areas:

- Standard data communication, each with an RF data frame output every 7 hours and holding the data from the previous
   14 hours
- Emergency data communication is triggered instantly when a predefined event emerges.
